### About the *SER-7000* Series

Congratulations! You have selected a very flexible point of sale terminal designed to provide years of reliable service. Your SAM4s/Samsung dealer will help you configure the *SER-7000* to your specific needs.

The *SER-7000* Series is offered in two different versions:

- The *SER-7000* features a flat 160-position keyboard with 107 NLU keys. (NLU keys are used to merchandise categories/departments or for individual menu items in a restaurant environment.) Because it offers protection from spills, this keyboard works best in restaurants, food service shops, or convenience stores where food is served.
- The *SER-7040* features a 90-position keyboard with traditional raised keys. In the standard configuration, the keyboard provides 15 NLU keys – it can be expanded to 40 NLU keys. The *SER-7040* works best in retail stores, or shops where it is not necessary to place a large number of preset item keys on the keyboard.

*SER-7000* series manuals include instructions for both models. The keyboard is the only significant difference between the two models. All other features are the same, unless otherwise noted.
