6. Service Mode (SRV) Operation

To go into SRV mode, the service key (LKGIM7113RCZZ) is required for service mode operation.

6-1. Reset Operation

At SRV mode (SRV1), the following 2 types of reset operations are provided.

(1) Master Reset
When the Master Reset is excuted, the data stored in all the memories will be initialized such as preset memories. And all the totalizers/counters/date and time are cleared to zeroes.

[Key Operation]
① Turn the mode switch to SRV2 mode.
② Holding down the numeric 9 key, then turn the mode switch to SRV1.
③ (For ER2385)   (For ER2395)

Enter 90 and press CA/AT key.   Enter 91 and press CA/AT key.

9 0 → CA/AT   9 1 → CA/AT

④ Upon pressing CA/AT key, the master Reset is finalized.

Note: To verify the contents of the memories after Master Reset or Service Preset programming. A print message shown in Fig. 6-1 is given by doing following key operation.

9 0 0 → @/FOR → CA/AT

(2) Program Reset
By turning the mode switch from SRV2 to SRV1 mode, the register returns to initial status even while in a locked status or any registrations.
However, all the data before the reset are kept maintained except for resetting date and time memories.

Note: Job #901-D (Tabulation preset) varies by each country though, after Master Reset it will always be set at 2 (0.00). Therefore, you may be required to re-program the tabulation suitable for your country.
