

# SHARP®

ELECTRONIC CASH REGISTER

MODEL

# ER-3110

INSTRUCTION MANUAL

Workshop Copy.

If undue force is applied to the drawer, the cash register will become unstable.

This apparatus complies with the requirements of EN 55014, 02, 1987 and BS 800: 1988.

**CAUTION:**

For a complete electrical disconnection pull out the mains plug.

**CAUTION:**

The socket-outlet shall be installed near the equipment and shall be easily accessible.

# INTRODUCTION

Thank you very much for your purchase of the SHARP Electronic Cash Register, Model ER-3110. Please read this Manual carefully before operating your machine in order to gain a full understanding of its functions and performance. Please keep this Manual for future reference. It will help you, if you encounter any operational problems.

# IMPORTANT

- **Install your ER-3110 in a location that is not subject to direct radiation, unusual temperature changes, high humidity or exposed to water sources.**  
Installation in such locations could cause damage to the cabinet and the electrical components.
- **The register should not be operated by an individual with wet hands.**  
The water could seep into the interior of the ER-3110 and cause component failure.
- **When cleaning your register, use a dry, soft cloth. Never use volatile liquid, such as benzine and thinner.**  
The use of such chemicals will lead to discoloration or deterioration of the cabinet.
- **The ER-3110 register plugs into any standard wall outlet (local voltage  $\pm 10\%$  AC).**  
Other electrical devices on the same electrical circuit could cause the ER-3110 to malfunction.
- **If the register malfunctions, call your local dealer for service — Do not try to repair the register yourself.**

# PRECAUTION

This Electronic Cash Register has a built-in memory protection circuit which is operated by rechargeable batteries.

As you know, all batteries will, in time, dissipate their charge even if not used. Therefore to insure an adequate initial charge in the protection circuit, and to prevent any possible loss of memory upon installation, it is recommended that each unit be allowed to recharge for a period of 24 to 48 hours prior to use by the customer.

In order to charge the batteries, the machine must be plugged in and its power switch must be set to the "ON" position. This recharging precaution can prevent unnecessary initial service calls.
