IMPORTANT!

Do the following before using the cash register.

1. Install Batteries

Batteries must be installed in the cash register to prevent the data and user-programmed settings from being erased from memory when the AC power cord is accidentally disconnected or in case of a power failure. **Please install the three AA batteries before proceeding with setup and use of this cash register.** Once installed, the batteries will last approximately one year before needing replacement. At this time, the "L" symbol will appear on the display to indicate that the batteries are low and must be replaced within two days. For replacing the batteries, see page 35.

Install batteries according to this procedure:

1. Remove the cash register from its carton and packing materials.
2. Pull the printer cover upward and detach it.
3. Open the battery cover next to the paper roll cradle.
4. Insert the three new AA batteries.
5. Close the battery cover.

- Your cash register comes with a battery caution label. Please cut off the appropriate half and attach it to the battery cover.

6. Replace the printer cover.

- When inserting batteries place them so that the positive (+) and negative (-) ends face the proper direction as shown in the battery compartment.
- Do not mix battery types or brands.

2. Reset the Cash Register

In order for your cash register to operate properly, you must reset it before programming for the first time. Follow this procedure.

1. Insert the manager key (MA) and turn the mode switch to "PGM."
2. Insert the power plug while keeping  and  depressed simultaneously until the display shows "0.00".
 - The cash register is now reset and ready to be programmed.

- If you do this operation without installing batteries, a buzzer will sound three times.
- If you do this operation with a paper roll already installed, the printer prints "*****8".

- All the contents of memory are erased when the cash register is reset.
