

WI-125 Batch Controller User's Guide

Description

The WI-125 Batch Controller is a weight indicator and a three relay control unit. The three, 12 volt relays are powered and controlled by cutoff outputs (setpoints) from the indicator.

This unit is setup to provide a fast fill output, slow final fill output and an "at zero" output. Internal dry contacts are provided for each output.

You, the operator, enter cutoff values into the indicator through the keypad. The cutoff outputs provide a ground potential energizing the relays. As each succeeding cutoff is reached, the associated relay is de-energized.
